Urine Analysis of the Medical Checkup

Please pick up a urine collection receptacle at the student affairs section of your faculty or graduate school by the day before the medical checkup. Collect your urine in morning of the checkup day and bring it to the Health Service Center.

How to use a urine collection receptacle

1. Pull a yellow cover and turn it upside down. Insert it to a mouth of a cap.
2. Urinate on a receptacle and collect it. (Collect your urine with holding the yellow cover.)
3. After you collect your urine, pull the yellow cover and replace it. When you replace it, insert it firmly until it clicks.
4. Write your name and student ID on the label. Cut off the label from a line. Peel off a silver tape and whip the label to the yellow cover.

How to Undergo Urine Analysis

The Day before the Checkup: Before going to bed, discharge urine.

The Day of the Checkup: As soon as you wake-up, collect your urine. (Be sure not to collect the beginning and the last part of your urine.)

After you collect, keep in a cool place and bring the urine collection receptacle on the checkup day. Please submit it (without plastic bag) to a front counter of urine analysis.

Don’t forget to write your name and student ID on the label.

Submit it (without plastic bag) to a front counter of urine analysis.
